

Proteus

Overview

The Proteus eco-system is a collection of unique applications that work independently, or as part of a single integrated system. Each Proteus module is aimed at making bottom line improvements by improving utilisation, streamlining workflows, providing quick and efficient access to resources and reducing overheads.

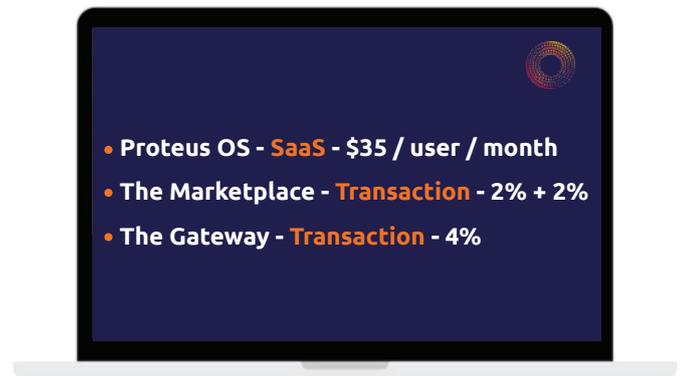

Developed with simplicity at its core, the **full Proteus platform** provides users with the following key benefits:

- Increased efficiency
- Reduced fixed costs
- Improved performance

How it Works

To access Proteus, or specific Proteus modules, a company creates a company account by going to www.proteus-work.com. The Proteus OS operates under a software as a service (SaaS) model with charges ranging from **\$10** / user / month to **\$35** / user / month. Billing is monthly or annually with **two months free** if paid annually

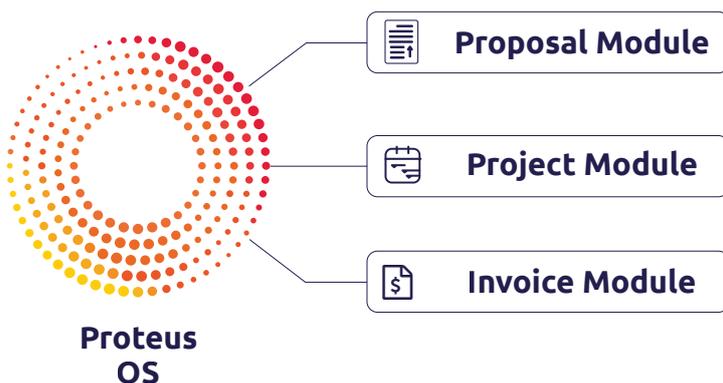

The Marketplace operates using a transactional model. It is free to create an account, and once a user begins freelancing through The Marketplace and invoices a company, a transactional fee of 2% from the freelancer and 2% from the company is paid. **The Gateway** operates using a 4% transactional fee. A user buys software credits and a 4% fee is added.

Proteus Model

- **Proteus OS - SaaS - \$35 / user / month**
- **The Marketplace - Transaction - 2% + 2%**
- **The Gateway - Transaction - 4%**

Proteus OS

Proteus OS sits at the centre of your key day-to-day workflows. Configurable to the needs of your company structure and industry, this is where you manage client work leveraging team collaboration with shared databases, templates and files. There are three key modules that all use the same data sets ensuring 100% consistency and accuracy across the full project lifecycle:

- G Suite and Microsoft 365 integration
- Dashboard overview
- Automated reporting
- Live tracking of timesheets and resources
- Form-led database entries
- Pre-configured templates
- Accurate cost estimates
- Easy invoice creation

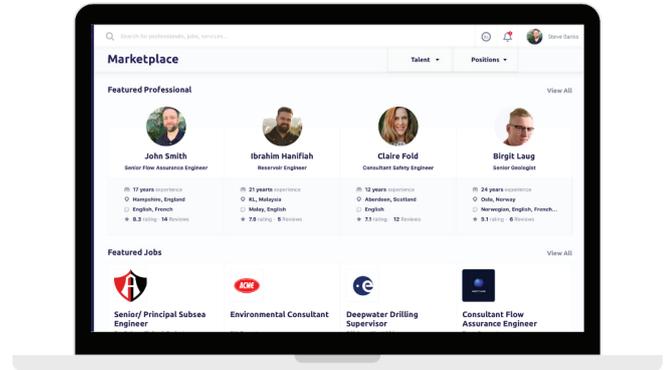

The Marketplace

A new way of accessing or finding talent. **The Marketplace** offers a database of rated skilled professionals that companies can use to search for rated talent, post projects, engage freelancers, invoice and pay all through a single, simple-to-use interface and wallet system. This makes finding and engaging team members simple, fast, efficient and offers huge savings as it costs less than traditional recruitment routes.

Using the Proteus OS platform, project onboarding is quick and seamless. Freelancers can invoice automatically and companies can manage payments in line with contracts. Proteus is integrated with online payment gateway Mangopay to facilitate rapid and seamless payment between companies and freelancers. Key benefits include:

- Confidence through rated professionals
- Cost effective
- Lower fees than recruitment fees
- Reduced overhead & fixed costs

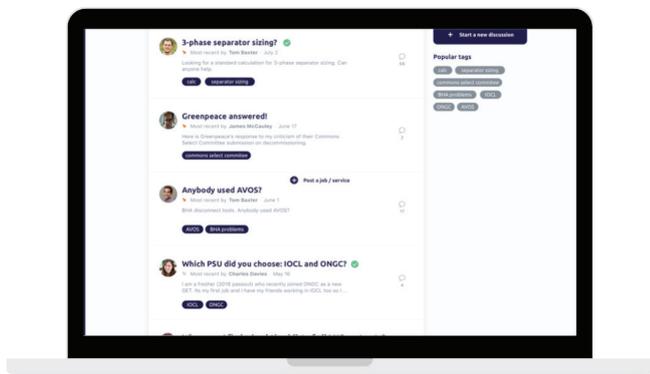

The Marketplace Overview

Xchange

Xchange is Proteus' global technical forum where you can exchange questions for answers. Based on the concept of a social feed, you can post technical or project-based queries, drawing on the wealth of knowledge held by other companies and freelancers. Collaborating with experts, you can focus your posts on specific topics and industry verticals. By actively participating in discussions, you can become recognised within your field of expertise, generating future work opportunities and networks. Key benefits include:

- Global collaboration
- Expert knowledge sharing
- Networking

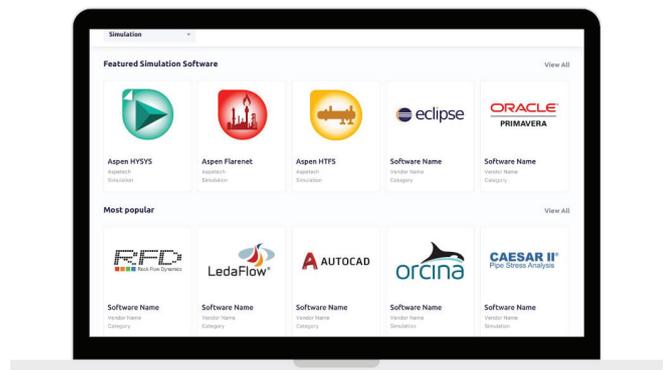

Xchange Interface

The Gateway

The Gateway provides staff or freelancer team members with instant access to leading industry software on a PAYG basis. This cloud-based model allows you to access the software when you need it, wherever you need it. Optimised for the job, you no longer need to worry about onboarding expensive, heavy-duty tools which end up under-utilised. Key benefits include:

- Remote access
- Cost effective
- 100% visibility of costs
- No expensive hardware required
- Clear usage reporting
- Integrated with project management system

The Gateway Interface
